TwinBed® II Regenerative Burners

Supplying TBII Regenerative Burners to the aluminum industry, we offer the best regenerative technology on the market today, providing the highest efficiency, unmatched quality, extended burner life, and lowest cost of ownership, while meeting the world's toughest NOx emissions standards.

47 well charged furnaces installed worldwide.

- Compact efficient regenerators use half the media of other designs - less congestion at furnace, easier media change, lower media cost
- Best efficiency - Cold air not required as portion of combustion air
- Straight through port construction without baffle
- Advanced controls system uses optimized logic and control components for best performance and reliability
- Low NOx and CO₂ emissions
